Employees by race

INSIGHTS:

1. The organization comprises 13 departments with a total workforce of 22,214 employees.
2. Approximately 25% of employees work remotely, while the remaining 75% are based at headquarters.
3. The average employee age is 38, reflecting a predominantly mid-career workforce.
4. The gender distribution is nearly balanced between male and female employees.
5. A significant proportion of employees originate from the State of Ohio.
6. The Engineering Department accounts for a notably large share of the workforce.
7. The majority of employees identify as white.
8. Recruitment has consistently averaged around 1,120 new hires annually over the past two decades.

SUGGESTIONS:

1. The company could continue to keep a healthy balance between male and female employees, since society is made up of both. The inputs of both genders in the company will reflect the service needed by society.
2. It might also be worth reviewing how much the company will continue to depend heavily on workers from Ohio.
3. The Engineering Department is quite large, which makes sense given the services offered by the company. However, since the average age of employees is around 38 years, extra recruitment for the training department could help them grow further in their careers.

SUGGESTIONS:

4. Recruitment strategies can be broadened to include candidates from diverse racial backgrounds, strengthening inclusivity and representation.
5. The average workforce age of 38 represents a balance between innovative approaches and established practices. Preserving this equilibrium will sustain both creativity and reliability.
6. By increasing remote recruitment, the company can reduce on-site hiring costs. Savings from this adjustment could be redirected to the Marketing Department, enhancing outreach and brand visibility.
